

- 
- A scatter plot visualizing data points categorized by environment and fault type. The plot shows several distinct clusters of points. The 'Normal' category (orange) is the largest, occupying the right half of the plot. The 'SurroundingEnvironment' (blue) is a small cluster on the left. The 'HardwareFault' (green) is a cluster at the bottom center. The 'ParamViolation' (red) is a cluster in the upper left. The 'RegulationViolation' (purple) is a single point near the center. The 'CommunicationIssue' (brown) is a single point near the center. The 'SoftwareFault' (pink) is a cluster at the top center. The 'SurroundingEnvironment' (blue) is a cluster on the left. The 'Normal' (orange) and 'SoftwareFault' (pink) clusters have some points that are semi-transparent, suggesting overlap.
- SurroundingEnvironment
 - Normal
 - HardwareFault
 - ParamViolation
 - RegulationViolation
 - CommunicationIssue
 - SoftwareFault
