

- 
- A scatter plot showing the distribution of various system states. The plot features several distinct clusters of points, each representing a different category of system state. The categories are defined in the legend: SurroundingEnvironment (light blue), Normal (orange), HardwareFault (green), ParamViolation (red), RegulationViolation (purple), CommunicationIssue (brown), and SoftwareFault (pink). The 'Normal' cluster is the largest and most central, while other clusters are more isolated. Some points from different categories overlap, such as a green point within the orange cluster and a blue point within the pink cluster.
- SurroundingEnvironment
 - Normal
 - HardwareFault
 - ParamViolation
 - RegulationViolation
 - CommunicationIssue
 - SoftwareFault
