

- 
- A scatter plot showing data points categorized by fault type. The plot features several distinct clusters of points in different colors. A legend in the top right corner identifies the categories: SurroundingEnvironment (blue), Normal (orange), HardwareFault (green), ParamViolation (red), RegulationViolation (purple), CommunicationIssue (brown), and SoftwareFault (pink). The 'Normal' cluster is the largest, forming a diagonal band from the top center to the bottom right. Other clusters are more compact and localized, such as 'ParamViolation' on the left and 'SurroundingEnvironment' at the bottom center. Some points from different categories are scattered within the 'Normal' cluster, indicating overlap or misclassification.
- SurroundingEnvironment
 - Normal
 - HardwareFault
 - ParamViolation
 - RegulationViolation
 - CommunicationIssue
 - SoftwareFault
