

- 
- A scatter plot showing the distribution of various system faults. The plot features several distinct clusters of colored dots. A large, dense cluster of orange dots (Normal) occupies the lower-right and central portions of the plot. Other clusters include green dots (HardwareFault) in the upper-left and middle-left, blue dots (SurroundingEnvironment) in the upper-middle, and red dots (ParamViolation) in the middle-right. Smaller, more dispersed groups of purple (RegulationViolation), pink (CommunicationIssue), and brown (SoftwareFault) dots are scattered throughout the central area. The legend in the top-right corner identifies each color with its corresponding fault type.
- SurroundingEnvironment
 - Normal
 - HardwareFault
 - ParamViolation
 - RegulationViolation
 - CommunicationIssue
 - SoftwareFault
